Aditya Poddar

Full Stack Engineer — Next.js, React, Node.js, TypeScript, AWS

Open to Remote / Hybrid / On-Site | +91 78924 81668 | adityapotdar7309@gmail.com | GitHub | LinkedIn | adityapoddar.site

Executive Summary:

Full Stack Developer with an M.Sc. in Physics and 1.5+ years of production experience architecting scalable web applications using Next.js, React, Node.js, and TypeScript. Proven track record of scaling a 400+ tool SaaS platform, automating CI/CD cloud deployments across AWS and Docker, and delivering high-converting digital solutions from database design to production.

Technical Skills:

Languages: JavaScript (ES6+), SQL, Java, HTML5, CSS3
Frameworks & Libraries: Next.js, React.js, Node.js, Express.js, Tailwind CSS, Material UI
Databases: MongoDB Atlas, MySQL, Mongoose ODM
Cloud, DevOps & Tools: AWS (EC2, S3, IAM, API Gateway, Amplify), Docker, Kubernetes, GitHub Actions (CI/CD), Vercel, Render, Git

Work Experience:

Full Stack Developer **Nov 2025 – Present**
Yuva Nexus Technologies LLP *Intern: May 2025 – Oct 2025 (Converted to Full-Time via PPO)*

- **Architected & Scaled a 400+ Tool SaaS Platform:** Engineered a production SaaS application hosting 400+ analytical calculator tools using Next.js Static Site Generation (SSG) and the dynamic Metadata API, establishing programmatic SEO indexing to drive sustained organic traffic growth.
- **Frontend Performance :** Reduced initial bundle payloads by implementing file-based routing system of Next.js and responsive Tailwind CSS layouts, consistently achieving high Lighthouse scores.
- **Modular API Architecture & CI/CD Automation:** Designed extensible RESTful APIs and reusable TypeScript/React component architectures paired with automated GitHub Actions CI/CD workflows, enabling rapid deployment of new tools with zero regression.
- **Automated Transactional Workflows:** Engineered event-driven client notification pipelines by integrating the Resend API, ensuring reliable transactional email delivery.

Projects:

CodePulse | Cloud Version Control System | *Node.js, React, Express, MongoDB, AWS, Docker* Live Demo

- Engineered a custom CLI version control system using Node.js, `yargs`, and `chalk.js` capable of tracking file mutations, staging snapshots, and executing core repository lifecycles (`init, add, commit, push, pull, revert`) across local and remote environments.
- Architected a fault-tolerant cloud backend on AWS EC2 and API Gateway, decoupling heavy commit blob storage directly to AWS S3 with strict IAM policies while indexing metadata in MongoDB Atlas to minimize database read/write overhead.
- Containerized backend services using Docker for environment parity and implemented stateless JWT and `bcrypt` authentication, powering a React dashboard featuring many-to-many repository starring and a dynamic contribution activity heatmap.

Custom Merchandising E-Commerce & Lead Platform | *Next.js,JavaScript,Tailwind CSS,Framer-Motion* Live Demo

- Spearheaded the digital transformation for a custom manufacturing client (Bharat Customized Water Bottle) by architecting an SEO-optimized Next.js storefront utilizing Static Site Generation (SSG) for instant catalog browsing across mobile and desktop.
- Engineered an interactive product showcase that dynamically serializes user order specifications and routes high-intent buyers directly into pre-filled WhatsApp Business threads, eliminating multi-step checkout drop-offs.
- Automated B2B bulk-order lead capture by implementing a serverless quote-inquiry workflow integrated with the FormSubmit API and client-side validation, routing verified customer inquiries directly to the client's sales pipeline.

Education & Certification:

Bachelor of Science (B.Sc.) | Gulbarga University **2019 – 2022**

Master of Science (M.Sc.) in Physics | Central University of Karnataka **2022 – 2024**

Full Stack Web Development Certification | Apna College **2025**
